CRP073 SS - 7 button control panels

SCI0410S - 4 circuit inductive controller

SCI1205S - 12 circuit inductive controller

Lord's has long been seen as the 'Home of Cricket' and the game's spiritual 'headquarters'. But its importance is not merely historical. In practice it remains, to this day, perhaps the most important single place in world cricket. The owners (MCC - Marylebone Cricket Club) recently invested a substantial amount of money to bring the venue up to date with a stunning refurbishment of the Museum, Library and hospitality areas.

iLight were asked to provide an intelligent control system for the project that would provide a flexible solution to cope with the many multi-application rooms that would require lighting level adjustment on a day-to-day basis.

The banqueting suite controls required special attention as the lighting had to be able to cope with regular meetings, gala dinners, award ceremonies, staff training and the all important MCC AGM. The lighting had to be complimentary to the events as well as the surrounding memorabilia, artwork and oak paneling that lends to the historic atmosphere.

Specially constructed scenes and moods were pre-programmed using the iLight iCANSOFT software. The simplicity of manual override and remapping of scenes through the 3.5" colour touchscreen is the real genius of the system. If a scene just isn't suitable, staff can change any light level at the touch of a button and save the levels for future use. This flexibility ensures the lighting control system is a fundamental part of the entertainment at Lord's for years to come.
